PAC chart

Given Data

Season

room-type

night

price

Required Results

total-price

Processing required

IF Season = "Peak"

ENDIF

IF $\text{night} > 7$:

$\text{total-price} \leftarrow \text{total-price} * 0.85$

Solution alternative

Define room-type &
Season as constants

Check if room category
is available or not

IPO chart

Q1.

INPUT	Processing	Module Reference	Output
season room-type nights	1. Base rate: If season = Peak: - Standard = 5000 - Deluxe = 8000 - Suite = 12000 Else if season = Off-peak - Standard = 3000 - Deluxe = 5000 - Suite = 8000	Calculate	total pay
	2. At Total price: Base rate * nights	Calculate	
	3. Discount: If nights ≥ 7 total price * 0.85	Calculate	
	4. INPUT season	Read	
	5. INPUT room type	Read	
	6. Input nights stayed	Read	
	7. Output total price	Print
